

# Lafil 400 Series Vacuum Filtration / Purification System

## Filtration System

### Introduction

Lafil 400 is the world's first filtration system which combines vacuum source and filtration ware into one unit. Its compact design can save much bench space as compared with traditional platform. In addition, its fence-like can prevent the filtrationware from being tipped over by user's carelessness. Lafil 400 can be used with a variety of filtrationware for different applications such as water sample filtration for suspended solid test, micro organism test, cell culture purification or suction etc.

### Applications

- General filtrations
- Water sample filtration for suspended solid test
- Water sample filtration for micro organism test
- Cell culture medium purification
- Cell culture medium suction

### Benefits:

- Save much of bench space
- Fence-like platform prevents the filtrationware from being tipped over
- Waste bottle equipped with overflow protection
- CE approved, two years warranty

A variety of filtrationware available for many different applications.
